

PatSeer achieves SOC 2 Type 2 Certification Reinforcing its Commitment to Customer Data Security

Pune, India - April 12, 2023: Gridlogics, the provider of the leading patent research and intelligence software PatSeer, announced today that it has obtained the SOC 2 Type 2 certification for its PatSeer platform, demonstrating its commitment to maintaining the highest security standards for SaaS-based platforms.

With thousands of daily users from product-based companies, legal services, law firms and patent offices running searches on PatSeer, customer data security is of utmost importance. The SOC 2 Type 2 certification affirms that PatSeer adheres to the strongest security standards, ensuring that the platform is secure and dependable.

The company underwent rigorous third-party inspections that tested the validity of its security controls and operating efficiency. Criteria such as availability, confidentiality, privacy, and processing integrity were considered. The audit process evaluated dozens of controls, including employee onboarding, password protection, training, and multifactor authentication, which required inputs from the Development, IT Security, Quality Assurance, and HR departments.

After several months of investments into additional security processes and infrastructure needed for the compliance, Gridlogics received the SOC 2 Type 2 certification with zero exceptions, signifying that the company's systems and processes have been tested and audited to meet the highest security standards. As data security and privacy become increasingly crucial, this achievement highlights the company's ongoing commitment to protecting its customers' valuable and confidential assets from the risk of data breaches, loss, or cyber-attacks.

"We are proud to have achieved this certification (SOC 2 Type 2) which is an essential milestone in our roadmap for PatSeer. Commitment to high quality security and data protection is our main priority. We intend to continue investing in this area to ensure that we maintain our customers' trust," said Manish Sinha, CTO of Gridlogics.

The SOC 2 Type 2 certification reinforces Gridlogics' position as a leader in the patent research and intelligence industry, and customers can be assured that their data is secure on the PatSeer platform.
